

Zoom Presentation and Viewing Tips

The following tips will provide for better video presentation through Zoom:

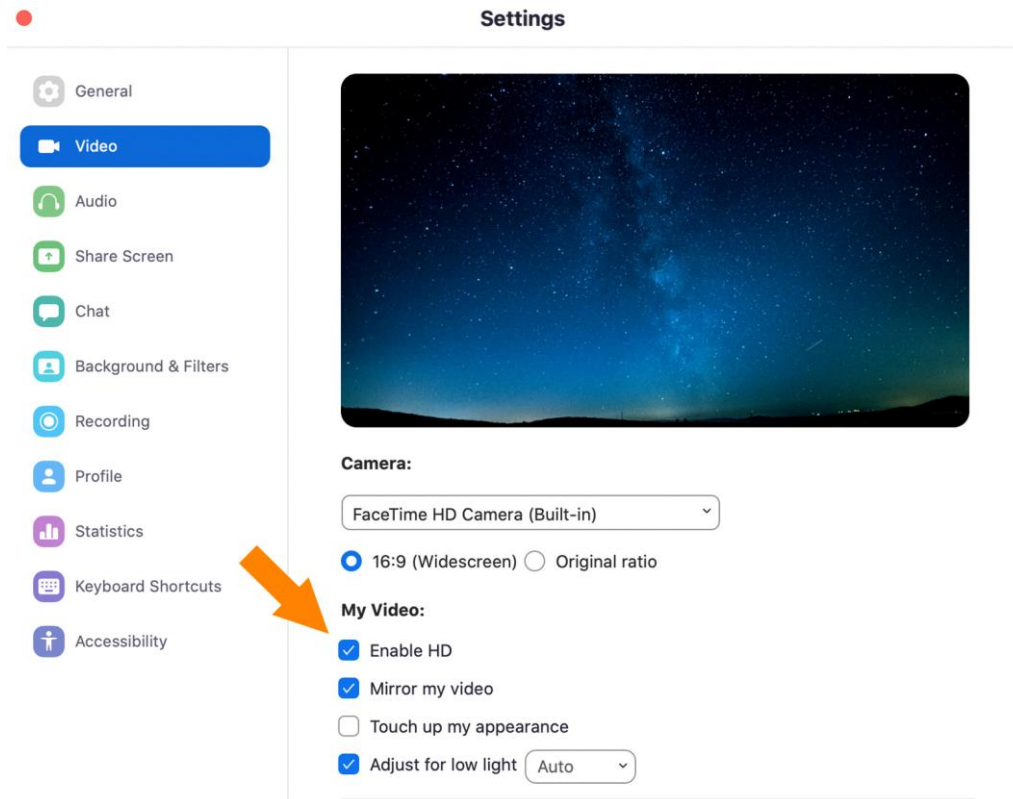

The Basics

1. Click the green **Share Button** on your Zoom screen.
2. When the sharing window pops up, click on the screen where your video resides in.
3. Tick **“Share computer sound”** and **“Optimize Screen Share for Video Clip”** option.
4. Click share and play video.

Additional tips for a smoother video sharing:

1. You can turn off HD video in **Start Video --> Video Settings** and tick off the **“Enable HD”**. You can also ask your viewers to do the same so everyone can free up their bandwidth.

2. You can lower the resolution/quality of the video in the video player. Select the **gear icon** and choose a lower resolution number.

3. You can also ask viewers to turn off their video by going to the **Start Video icon** and click it off during the video sharing and turn it back on once the video sharing is over.
4. Connect your computer **via an ethernet cable** whenever possible rather than over WiFi.
5. If you need further support, please contact info@rhythmix.org.
